Show up in the GitHub repos

<https://github.com/open-gitops>

Our discussions are active threads where we go from idea to potential solutions

Lot's of open Pull Requests for folks to work on

The screenshot shows the GitHub profile for OpenGitOps. At the top, there's a profile header with the OpenGitOps logo, the name "OpenGitOps", and a description: "CNCF Sandbox project for lasting programs, documents and code from the GitOps Working Group." It also includes links to the website, Twitter, and mentions it's part of the Cloud Native Computing Foundation. There's an "Unfollow" button on the right. Below the header is a navigation bar with tabs for Overview, Repositories (5), Projects, Packages, Teams (8), People (13), and Insights. The main content area is titled "Pinned" and shows two repository cards: "project" (Public) with 225 stars and 14 forks, and "documents" (Public) with 207 stars and 20 forks. To the right, there's a "View as: Public" dropdown and a "People" section showing a grid of user avatars. At the bottom, there's a "Repositories" section with a search bar and filters for Type, Language, and Sort. The first repository listed is "project" (Public) with a small activity graph.

Show up in Slack

<https://cloud-native.slack.com/archives/C026D3RE7FB> or <https://bit.ly/slack-gitops>

Our discussions are active threads where we go from idea to potential solutions

Get involved here if you need a nudge getting started or just want to say hello!

Spread the word

- Tell your friends how you do dev and ops through a pull request
- Tell us what you're up to; we're curious to hear about your GitOps implementations (GitHub or Slack)
- GitOps encompasses the four principles: <https://opengitops.dev/#principles>
- "If it's not in git it's only a rumor"
- GitOps moves at the speed of Kubernetes

Thank YOU!

**Have a great
KubeCon!!!**
